On an A4 drawing paper, we will draw the usual margin and boxes. Here you can see the lengths to use, expressed in millimetres.

A

Now, we are going to divide the segment AB into three equal parts, by using the Thales Theorem.

Draw a ray from the point A, then take three equal segments on it, using your compass. It doesn't matter the length or the angle of the ray, nor does the length of the segments, as long as they are equal.

B

A

Now, we connect the points 3 and B.

B

And, using our set squares, we draw two parallel lines to the previous one, from the points 1 and 2, making sure that we cross clearly the line AB. This way, we have divided this segment into three equal parts.

DO NOT PRINT THIS PAGE

DO NOT PRINT THIS PAGE

Once the auxiliar lines erased, we draw horizontal lines from every divisory mark. Remember to use your set squares to make sure that these lines are parallel to the horizontal lines of the margin.

Now, you have divided the available drawing space into three equal parts.

We find the centre of each
rectangle by drawing their
diagonals.

After erasing most of the diagonals and leaving only a small x,

we draw horizontal segments to use as axis of the ovals or part of it on the ovoid.

The first two segments must be centered on the rectangle.

Here you have the lengths to use.

These segments are perpendicular to one another, and cross at their centre.

Three parts oval: we start by dividing the long axis into three equal parts.

Remember: once the end of the axis (B) and the third mark of the ray (3) connected, we must draw two parallel lines to that one through the marks 1 and 2, using the set squares.

At this stage, please make a photocopy of the drawing and keep it.

DO NOT PRINT THIS PAGE

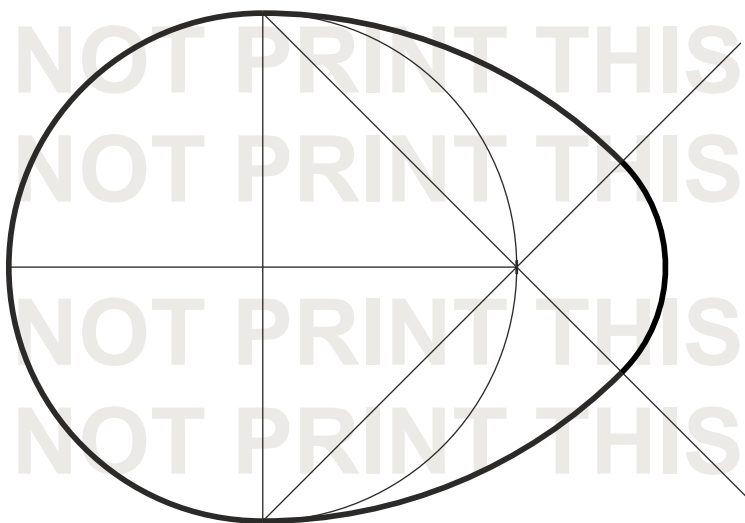

DO NOT PRINT THIS PAGE

Now, we ink in the lines, using calibrated markers. Use the 0.8 mm for the outline of the figures, the margin and the boxes, and the 0.2 for the rest of the lines

Finally, we identify our work, using the 0.4 calibrated marker and in capital letters, and submit it to the teacher, along with the photocopy we previously made.
